## **General care and cleaning of waterdecor products**

To preserve the finish on our plumbing fixtures, never clean with chemicals, abrasives or cleaning pads; these will damage the surface. Only use a soft, damp cloth.

Wiping away water spots and toiletry product spills, as soon as they occur, is the best way to maintain our beautiful fixtures. If allowed to build up, these will damage the surface of the fixture.

## **Living Finish and Unlaquered products**

Living Finishes require the same maintenance: gently wipe the fixture clean after use.

Polished Copper Non-lacquered (009), Polished Brass Non-lacquered (000), and Oil Rubbed Bronze (Living 010) will naturally patina and change color over time.

\* Satin Nickel is not a Living Finish but it is more delicate than other lacquered products.
